

Stable, variable snowpack in N. Bridgers

Date

Mon, 04/14/2025 - 14:30

Activity

Skiing

We found soft snow on north-facing terrain in Sac Bowl and off Pomp Peak, skiing until about 2 p.m. on 4/14. The recent storm winds stripped some southeast facing terrain down to crust, but had deposited 4-6 inches of creamy pow in sheltered N zones. Skiing was mostly bomber, with the exception of some wind slab we avoided on a start zone immediately below ridgeline in Sac Bowl. Saw a few small dry loose / point release slides in southern Bridgers, but nothing in N. Bridgers except for old debris piles.

Region

Bridger Range

Location (from list)

Sacajewea Peak

Observer Name

B. Rad
